

## Press Information

### **Sandvik launches five new nickel based welding consumables to its growing portfolio**

Sandvik is launching five new welding wire and covered electrode additions to its Sanicro™ nickel based welding materials program, on its stand A33, hall 6, at India Essen Welding & Cutting, Bombay Convention & Exhibition Centre, Mumbai, 5-7 October. Complementing the introductions is a new flux, Sandvik 69S specifically designed for ESW high speed cladding.

Designed for use in the most demanding environments, this latest introduction significantly increases the advanced welding materials portfolio available from Sandvik. The new, nickel based grades include: welding wire Sanicro 55 (Alloy 686 / ERNiCrMo-14); covered electrodes, Sanicro 53 (Alloy 617 / ENiCrCoMo-1), Sanicro 54 (Alloy C22 / ENiCrMo-10), Sanicro 56 (Alloy 276 / ERNiCrMo-4) and Sanicro 59 (Alloy 59 / ENiCrMo-13).

“We now offer customers a complete portfolio of welding consumables for stainless and nickel alloys to help them overcome corrosive environments in the most demanding applications,” explained Clemente Tallarico, Sandvik Global Product Manager Welding. “This is part of a strategic move to make Sandvik the ‘go to one-stop-shop’ when it comes to advanced material solutions for joining and cladding requirements.”

The Sanicro™ portfolio of welding consumables from Sandvik is particularly appropriate for fabricators and customers offering specialist welding services to the oil and gas, chemical and petrochemical industries and on pollution control equipment for thermal power and waste incinerators. In use they are designed to offer good weld puddle control and low spatter combined with excellent resistance to corrosion.

Live welding demonstrations will take place during the exhibition on the Sandvik stand, No. A33 (hall 6), at India Essen Welding & Cutting. Materials specialists will be on hand to meet with visitors and demonstrate the Sandvik Welding Handbook app.

Detailed information on all the new Sanicro™ nickel grades and the growing portfolio of welding consumables can be found on the web ([smt.sandvik.com/welding](http://smt.sandvik.com/welding)), in the recently updated Sandvik Welding handbook, which can be downloaded as a pdf from: <http://smt.sandvik.com/welding-handbook>, or the new Sandvik Welding Handbook phone app, which is available for iPhone and Android.
