# Press Release

## **Live demonstration of the new Sandvik Welding Handbook at Fabtech, Chicago, November 9-12, 2015**

This year Sandvik will present the new Welding Handbook at the Fabtech show in Chicago, USA, North Hall, booth #N6028.

The handbook has gone through a total makeover and includes comprehensive product information and material datasheets for every welding grade available in Sandvik's extensive welding program, as well as shielding gas recommendations.

The Welding Handbook is generated from existing information on the [smt.sandvik.com](http://smt.sandvik.com) website. As soon new grades are added, or updates to the site are made, a new pdf version of the handbook will be issued for downloading from the site: <http://smt.sandvik.com/welding-handbook>

The product pages in the handbook will give detailed information about our offering and the benefits of choosing Sandvik products. The material datasheets include all technical data about the grades and our welding recommendations.

In the booth Sandvik will also display its extensive program of welding consumables in advanced stainless steels and special alloys developed to withstand conditions in the most demanding applications. Learn more about;

- **Sanicro** – a complete program of superior nickel based welding wire specifically developed to meet the needs of vessel fabricators. Sanicro grades offer high tensile strength, high yield strength, good ductility, and uniform elongation. Controlled iron content provides superior corrosion resistance and meets increasing market demand for max. 0.5% iron in wire chemistry.

Technical experts from Sandvik will be on the stand throughout the exhibition and available to answer questions or give advice.

## **More about Sandvik**

Sandvik is a world-class developer and manufacturer of stainless steels and special alloys for demanding environments as well as products and systems for industrial heating. And for more than 80 years, we have been one of the leading global suppliers of welding materials for stainless steel and nickel alloys.

The development of welding materials always goes hand-in-hand with the development of our new steel grades. This means that you can use our material innovations and can rest assured that the matching welding materials will maintain the required quality for both industry standards and your own company's particular needs.

Sandvik controls the entire steel making process – from the melt to finished product. This is why all Sandvik products are characterized by chemical composition within close tolerances, mechanical control and consistency between heats and batches.
